INFORMATION

All submissions (Project Plan, v1-v3 projects) can also be found in the github repository in the submissions folder.

The form validation and image gallery that has been used in this project can also be found in this Github repository.

The website contains five destinations as mentioned in the project plan. The core has been developed in a way that any addition to the destination search or in the destination page would be much simpler. Also the cards in the homepage for the same reason (that only 5 destinations are covered) are not clickable.

For more information about this project make sure to check the Project Plan in the submissions folder as well as the Developer's Manual.
